

**TURN** : Selects speaker type  
**PUSH** : Toggle OPEN-BACK <-> CLOSED-BACK cab.  
**HOLD** : Bypass <-> Engage the cabsim.

**Speaker Type** : G(uitar) or B(ass)  
**Speaker Size** : 10 inch or 12/15 inch  
**Cab Type** : Opened-Back or Closed-Back

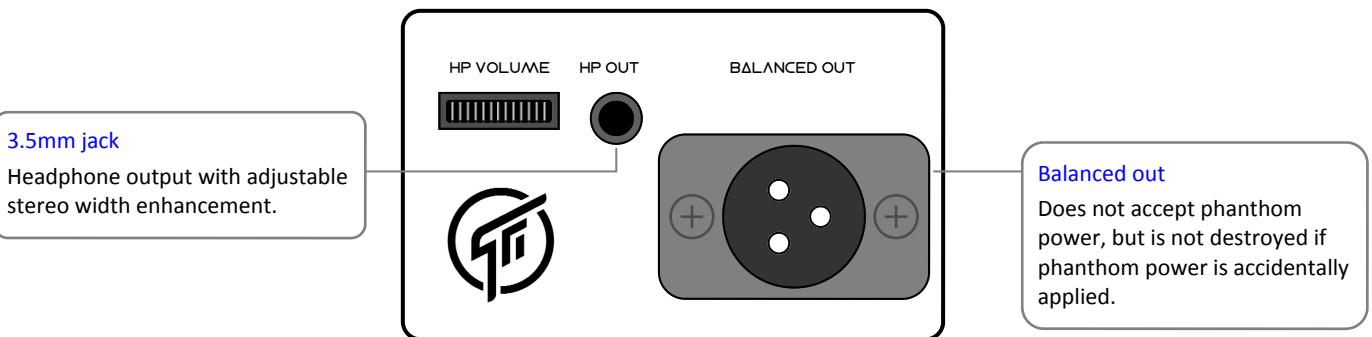

**TURN** : Adjust Mic Position.  
**PUSH** : Toggle FAVE-1 <-> FAVE-2.  
**HOLD** : Store current setting to FAVE.  
**TWIST** : Adjust short delay on the Right-channel of headphone out.

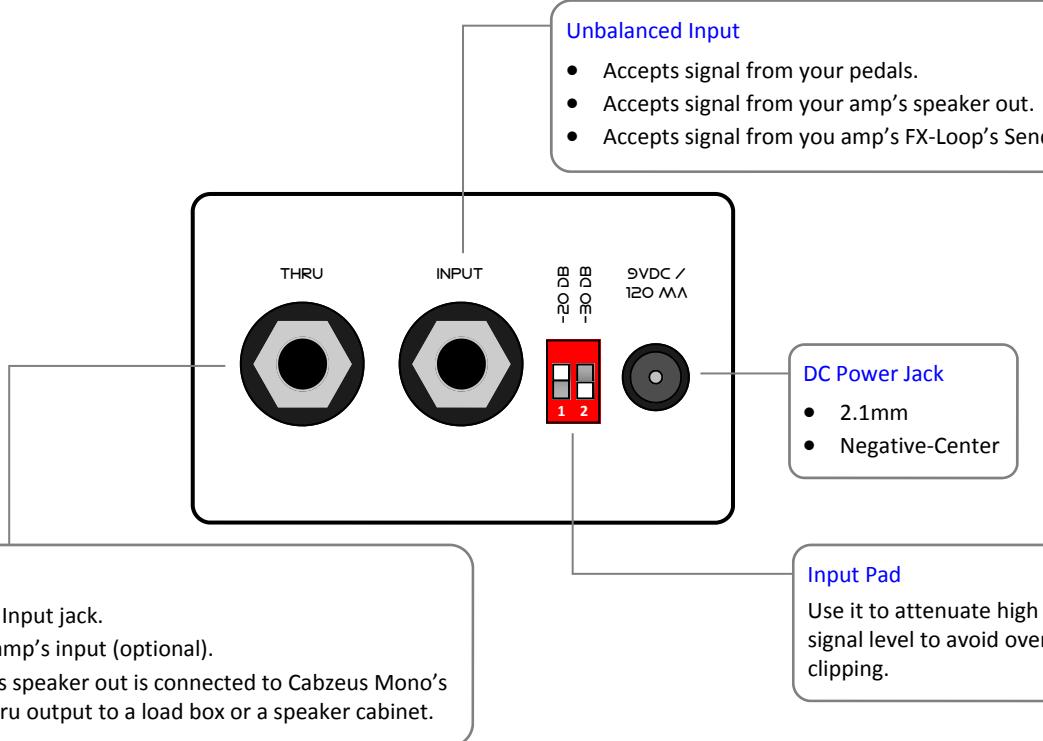

## SAVING PRESETS

1. First select the desired preset location : Fave-1 (blue) or Fave-2 (orange) by pushing the lower-right knob.
2. Start finding the desired sound by browsing the speaker/cab type (upper-left knob) and adjusting the mic placement (lower-right knob).
3. Store the current setting by holding down the lower-right knob until the corresponding Fave LED flashes 3x.

## STEREO WIDTH ENHANCEMENT ON HEADPHONE OUT

Cabzeus Mono employs a simple stereo-enhancement technique for the headphone output, where a short delay is applied to the right-channel audio. The amount of delay is adjustable from 0 ms to 30 ms. To make the adjustment : *turn the lower-right knob while holding it down - we call this operation twisting the knob*. The delay setting is saved in the preset as well.

### Speakers Selection

	Speakers	Modelled after :
GUITAR	VNTAGE30 - 10 "	<i>CELESTION Vintage 30</i>
	- 12 "
