

Jonassus drive is a dual-channel overdrive pedal offering a sweet, warm, and articulate low-gain overdrive (“Low Channel”) and ballsy medium-high gain overdrive (“High Channel”). Each channel has its own Volume and Gain control, plus a set of clipping mode options :

- Diode / Asymmetric - *more compression and bites.*
- Diode / Symmetric - *less compression, smooth, balanced.*
- LED / Symmetric - *wide opened, warm.*

User Manual

Need only one channel?

Though having two distinct overdrive channels available on tap is great, sometimes you may overwhelmingly prefer to use only one of the channels, the low-gain channel only, or the high-gain channel only. We've anticipated this and make it possible for you to use only one of the channels, and yet have the luxury of two different set of controls : the Left-side controls and the Right-side controls, which in effect gives you 2 'presets'!

There are DIP switches on the rear side of the pedal that you can use to choose whether you want to use the Low Channel only, the High Channel only, or both.

↑↑ OR ↓↓ **Left-side controls = Low Gain Channel**
Right-side controls = High Gain Channel

↓↑ **Left-side controls = Low Gain Channel**
Right-side controls = Low Gain Channel

↑↓ **Left-side controls = High Gain Channel**
Right-side controls = High Gain Channel
